

warm in meshes about $\frac{3}{4}$ of an inch square. He was put into the lodge room sometime at night, he swung the blind back and put something in behind it and swung it top that set it off; then he went to work and broke every square of glass out of the window, 28 lights; he had torn his clothes up into small pieces; there is an iron grate the same size of the glass $6\frac{1}{4}$ by $7\frac{3}{4}$; he had tried to step the hole up; he said the best he could do to keep from freezing was to dance until he could call the watchman. I asked him how long before the watchman came. He said it was as much as an hour or more, it seemed to me it was three weeks. It was a very cold night.

Ques. He seemed to know in the morning what he had done and all about it. Ans. Yes sir.

By Mr. Fall.

Ques. Are these windows all barred. Ans. Yes; formerly with a cast iron sash, but a man could take his feet and break it out; since that we have taken bars of iron and drilled holes through and put a rod of about half inch wrought iron so as to stand the kicking; the openings are the same $6\frac{1}{4}$ by $7\frac{3}{4}$, and the protection to keep the patients from breaking them is a piece of
